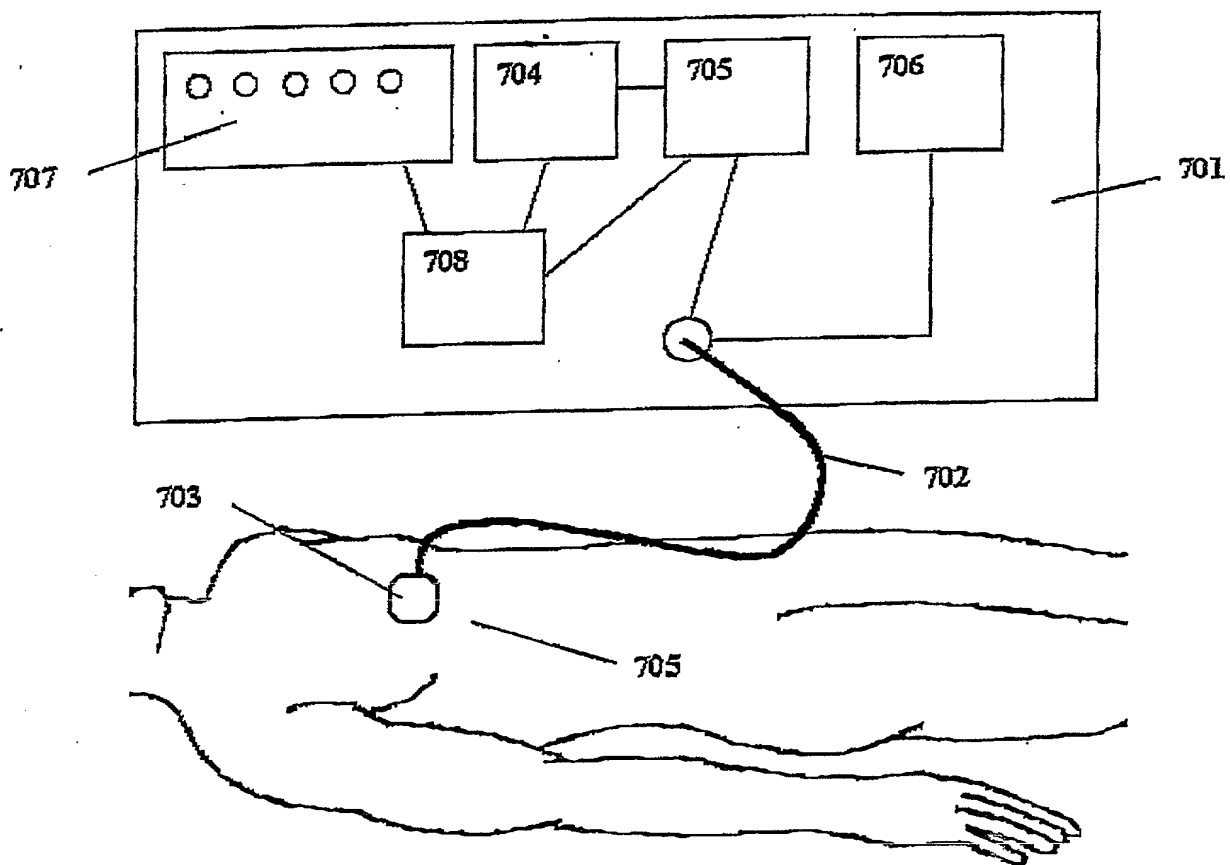

Figure 1

A cross-sectional view of a device with two vertical chambers, 401 and 402, and two side chambers, 403 and 404. The side chambers are located on the left and right sides of the vertical chambers. The device has a central horizontal passage connecting the two vertical chambers. The top of the device is sealed, and the bottom is open. The side chambers are connected to the vertical chambers via narrow passages. The device is shown in a cross-sectional view, with the vertical chambers being larger than the side chambers.
